## Stahl winners at HazardEX 2009

R.Stahl Ltd were pleased to participate in the HazardEX show that was held at the Barcelo Majestic Hotel in Harrogate.

Many visitors showed an interest in finding out more about our vast range of products, samples of which were on display at the stand. Examples of lighting, switchgear, automation and system solutions were all displayed in full working order.

Staff enjoyed having the opportunity to meet many existing and potential customers. We were also pleasantly surprised to be acknowledged as the winners of the User Application of the Year Award, presented to Colin Payne, Sales Director. This was for the Variable Speed Drives and Centrifuges for Zone 1 Hazardous Areas. Many thanks for your nominations towards us receiving this award.

Elmess & R. Stahl Ltd: Leaders in design and manufacture of electrical equipment for 'EX' areas, combined with specialists for electrical heating systems.

## Renewed Partnership

We are pleased to announce the partnership of Stahl and Douglas Automation in Ireland.

Douglas is one of the longest running automation companies in Ireland boasting an enviable track record. With a history for cost effective solutions, innovation is the driver for the company.

Stahl, as a global leader for the design, manufacture and supply of electrical equipment is very pleased with this exclusive union. We feel that this will be a positive step forward for both companies as well as existing and new customers. The increased market knowledge will be of great value for all parties.

If your based in Ireland, add the Douglas' email address to your diary: [sales@douglas-esl.ie](mailto:sales@douglas-esl.ie)

## Ethernet-compliant new generation Ex-Remote HMI's

R. STAHL HMI Systems have launched robust Remote HMI stations for installation in rough industrial environments as well as hazardous areas of zones 1, 2, 21, and 22. The new ET/MT-5x6 series with 15" or 19" touch screens enables users to operate PCs in safe areas from field stations in many different ways. Alternatively, the HMIs can be coupled via a KVM box, which is the usual route.

With the KVM box, the Remote HMIs are also connected via TP or optical fibre Ethernet cables, for flexible communication. The systems feature IP66 front protection and can withstand extreme ambient temperatures ranging from -20 °C to +55 °C. By adding a heater and front protection plate, this increases to -40 °C to +55 °C. The stations also do not require any special housing for use within hazardous areas. They are easily serviced due to the modular design. For further information, please call 0121 767 6400 or email [info@rstahl.co.uk](mailto:info@rstahl.co.uk).
